

A. Bulbs

time limit per test: 1 second

memory limit per test: 256 megabytes

Vasya wants to turn on Christmas lights consisting of m bulbs. Initially, all bulbs are turned off. There are n buttons, each of them is connected to some set of bulbs. Vasya can press any of these buttons. When the button is pressed, it turns on all the bulbs it's connected to. Can Vasya light up all the bulbs?

If Vasya presses the button such that some bulbs connected to it are already turned on, they do not change their state, i.e. remain turned on.

Input

The first line of the input contains integers n and m ($1 \leq n, m \leq 100$) — the number of buttons and the number of bulbs respectively.

Each of the next n lines contains x_i ($0 \leq x_i \leq m$) — the number of bulbs that are turned on by the i -th button, and then x_i numbers y_{ij} ($1 \leq y_{ij} \leq m$) — the numbers of these bulbs.

Output

If it's possible to turn on all m bulbs print "YES", otherwise print "NO".

Examples

input

```
3 4
2 1 4
3 1 3 1
1 2
```

[Copy](#)

output

```
YES
```

[Copy](#)

input

```
3 3
1 1
1 2
1 1
```

[Copy](#)

output

```
NO
```

[Copy](#)

Note

In the first sample you can press each button once and turn on all the bulbs. In the 2 sample it is impossible to turn on the 3-rd lamp.

Codeforces Round 338 (Div. 2)
