## Find the Mean of a Numpy Array

Difficulty: **Easy**Accuracy: **79.79%**Submissions: **867+**Points: **2**Average Time: **15m**

### Problem Description:

Given a Numpy array, write a function to compute the mean (average) of the elements in the array.

### Numpy Schema:

You are given a 1-dimensional Numpy array.

### Example:

#### Input:

```
array = np.array([2, 4, 6, 8, 10])
```

#### Output:

```
6.0
```

**Explanation:** The mean of the elements in the array [2, 4, 6, 8, 10] is  $(2 + 4 + 6 + 8 + 10) / 5 = 6.0$ .
