Find the Maximum Element along Each Axes in a 3D Array

Difficulty: **Easy**Accuracy: **41.87%**Submissions: **976+**Points: **2**Average Time: **20m**

Problem Description:

Given a 3D Numpy array, write a function to find the maximum element along each axis.

Numpy Schema:

You are given a 3-dimensional Numpy array.

Example:

Input:

```
array = np.array([[[1, 2, 3], [4, 5, 6]], [[7, 8, 9], [10, 11, 12]]])
```

Output:

Maximum along axis 0:

```
[[ 7  8  9]
 [10 11 12]]
```

Maximum along axis 1:

```
[[ 4  5  6]
 [10 11 12]]
```

Maximum along axis 2:

```
[[ 3  6]
 [ 9 12]]
```

Explanation:

- The maximum along axis 0 is [**7**, **8**, **9**],[**10**, **11**, **12**].
- The maximum along axis 1 is [**4**, **5**, **6**],[**10**, **11**, **12**].
- The maximum along axis 2 is [**3**, **6**],[**9**, **12**] .
