Reverse Rows of a 2D Numpy Array

Difficulty: **Easy**Accuracy: **75.65%**Submissions: **598+**Points: **2**Average Time: **15m**

Problem Description:

Given a 2D Numpy array, write a function to reverse the rows of the array.

Numpy Schema:

You are given a 2-dimensional Numpy array.

Example:

Input:

```
array = np.array([[1, 2, 3], [4, 5, 6], [7, 8, 9]])
```

Output:

```
array([[7, 8, 9],  
       [4, 5, 6],  
       [1, 2, 3]])
```

Explanation: The rows are reversed, so the last row becomes the first and vice versa.
