min

The tool min returns the minimum value along a given axis.

```
import numpy

my_array = numpy.array([[2, 5],
                        [3, 7],
                        [1, 3],
                        [4, 0]])

print numpy.min(my_array, axis = 0)      #Output : [1 0]
print numpy.min(my_array, axis = 1)      #Output : [2 3 1 0]
print numpy.min(my_array, axis = None)   #Output : 0
print numpy.min(my_array)                #Output : 0
```

By default, the axis value is None. Therefore, it finds the minimum over all the dimensions of the input array.

max

The tool max returns the maximum value along a given axis.

```
import numpy

my_array = numpy.array([[2, 5],
                        [3, 7],
                        [1, 3],
                        [4, 0]])

print numpy.max(my_array, axis = 0)      #Output : [4 7]
print numpy.max(my_array, axis = 1)      #Output : [5 7 3 4]
print numpy.max(my_array, axis = None)   #Output : 7
print numpy.max(my_array)                #Output : 7
```

By default, the axis value is None. Therefore, it finds the maximum over all the dimensions of the input array.

Task

You are given a 2-D array with dimensions $N \times M$.

Your task is to perform the min function over axis **1** and then find the max of that.

Input Format

The first line of input contains the space separated values of N and M .

The next N lines contains M space separated integers.

Output Format

Compute the min along axis **1** and then print the max of that result.

Sample Input

```
4 2
2 5
3 7
1 3
4 0
```

Sample Output
