## Reshape a Numpy Array

Difficulty: **Easy**Accuracy: **61.61%**Submissions: **586+**Points: **2**Average Time: **15m**

### Problem Description:

Given a Numpy array, write a function to reshape the array into a 2D array with a specified number of rows and columns.

### Numpy Schema:

You are given a 1-dimensional Numpy array and need to reshape it to a 2-dimensional array with the given number of rows and columns.

### Example:

#### Input:

```
array = np.array([1, 2, 3, 4, 5, 6])
```

```
rows, cols = 2, 3
```

#### Output:

```
array([[1, 2, 3],
       [4, 5, 6]])
```

**Explanation:** The array [1, 2, 3, 4, 5, 6] is reshaped to a 2x3 matrix.
